College Name: Islamiah Women's Arts And Science College (Autonomous), Vaniyambadi.

College Code: tvu312

Date:08 03 2026

User Story:

As a Salesforce Admin, I want to design a cricket player performance monitoring application within Salesforce that records and analyzes detailed match statistics for each player. The system

will use custom objects such as Player and Match Performance with properly defined fields and relationships. By using master-detail and lookup relationships, the application will allow efficient tracking of player statistics, provide useful reports and dashboards, and help coaches and analysts evaluate performance for better team planning and development.

1. INTRODUCTION

1.1 Project Overview

CRICKET INSIGHT is a Salesforce-based application developed to record, manage, and analyze cricket player performance for every match.

The application uses Salesforce features such as custom objects, automation, dashboards, and reports to maintain structured player statistics.

This system helps coaches, analysts, and team managers track player performance, generate performance reports, and make strategic decisions based on real-time data.

1.2 Purpose

The main objectives of this project are:

• To digitize cricket player performance data

• To improve the accuracy of player statistics

• To provide centralized access to player data

• To support performance analysis through reports and dashboards

• To automate data management using Salesforce tool.

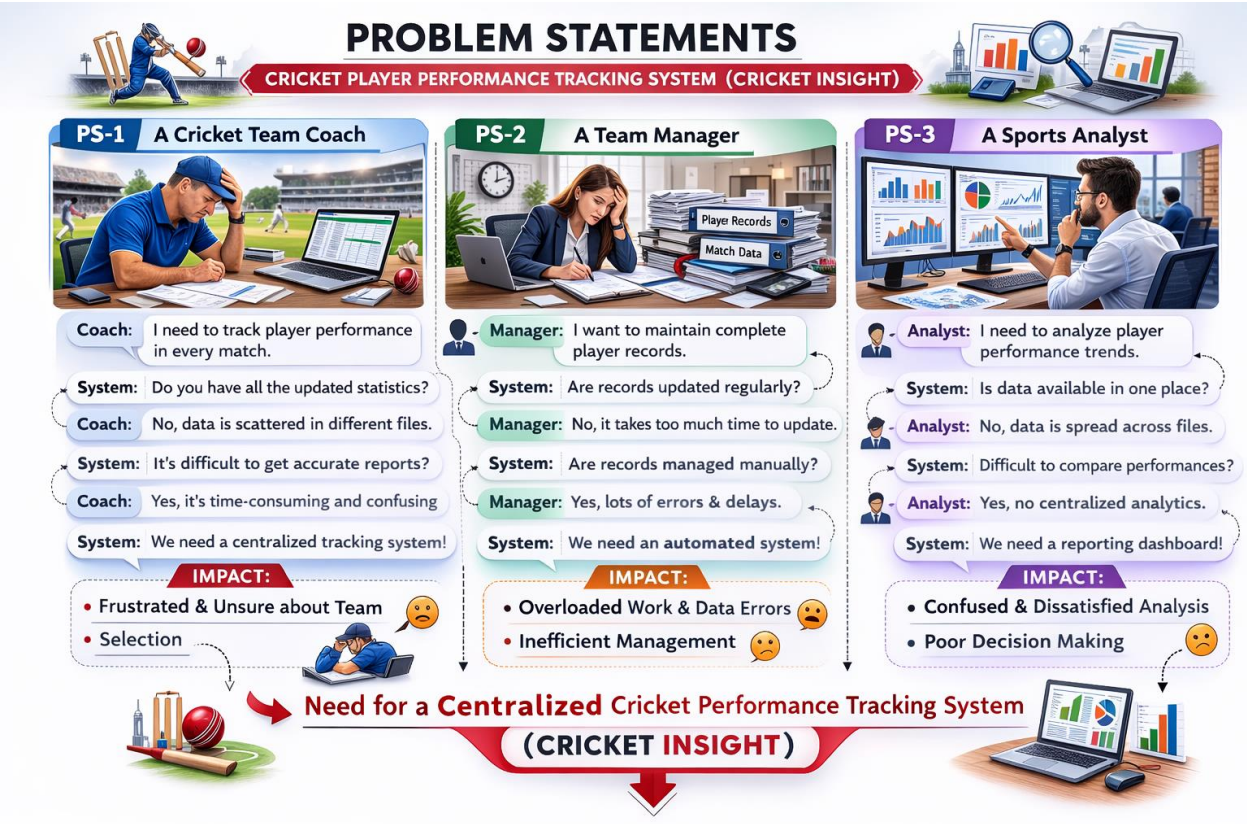
2. IDEATION PHASE

2.1 Problem Statement

PS	Customer	Trying To	But	Because	Feel

PS-1	Cricket Coach	Track player performance	Cannot easily access accurate statistics	Data stored in multiple files	Confused during team selection
PS-2	Team Manager	Maintain player records	Updating data takes too long	Records are managed manually	Frustrated
PS-3	Sports Analyst	Analyze player performance trends	Difficult to compare statistics	No centralized analytics system	Unsatisfied

PROBLEM STATEMENTS:



2.2 Empathy Map Canvas

Target Users

• Coaches

• Team Managers

• Sports Analysts

• Salesforce Administrators

Empathy Analysis

Think & Feel: Need reliable statistics and insights

Hear: Feedback from team management

See: Multiple spreadsheets and files

Say & Do: Collect and organize player data manually

M\ain Points:

• Data errors

• Time-consuming data entry

• Difficult performance comparison

Gain:

• Automated statistics tracking

• Faster decision-making

• Reliable performance insights

2.3 Brainstorming

Brainstormed Ideas

• Web-based cricket player database

• Mobile-based score tracking system

• Salesforce-based analytics platform

• AI-driven player performance analysis

• Dashboard-based sports analytics system

Selected Idea

Salesforce-based cricket performance tracking system (**CRICKET INSIGHT**)

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stages include:

• Login to system

• Add player details

• Record match statistics

• Generate performance reports

• Analyze player performance

• Support decision making

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR1	Player Registration
FR2	Match Performance Entry
FR3	Dashboard Creation
FR4	Report Generation
FR5	Automation using Flows

Non-Functional Requirements

1. Usability

The system must be simple and user-friendly.

Requirements:

• Easy interface

• Simple data entry forms

• User-friendly dashboards

Example:

A coach should be able to enter match statistics and generate reports easily.

2. Security

The application must protect player data from unauthorized access.

Requirements:

• Role-based access

• Secure login

• Data protection

Example:

• Coaches can view statistics

• Managers can edit records

• Admins manage system settings

3. Reliability

The system should function correctly without data loss.

Requirements:

• Stable system performance

• Data backup

• Error handling

Example:

Salesforce cloud backup ensures that no player data is lost.

4. Performance

The application should respond quickly when generating reports or dashboards.

Requirements:

• Fast loading pages

• Quick report generation

• Smooth dashboard performance

Example:

When an analyst generates a performance report for 100+ players, the report should load within 2–3 seconds. Optimized Salesforce queries and caching improve response speed.

5. Availability

The system should be accessible anytime.

Requirements:

• 24/7 access

• Cloud-based system

• Minimal downtime

Example:

Coaches should be able to access CRICKSTATS even during tournaments at night or on weekends. Salesforce provides high uptime with cloud hosting

6. Scalability

The system should support more teams and players in the future.

Requirements:

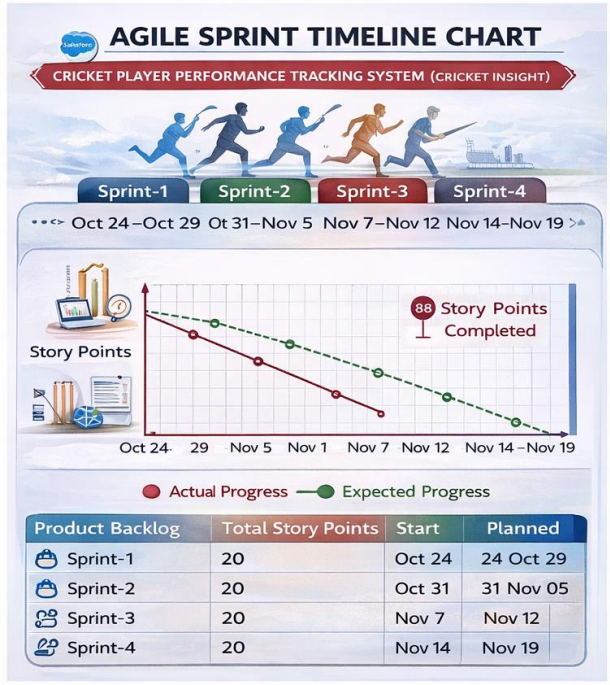
• Ability to store large data

• Support multiple teams

• Maintain performance with increased

Example: If CRICKSTATS is extended from one team to 50 teams, the system should still perform smoothly. Salesforce cloud infrastructure automatically scales storage and processing

3.3 Data Flow Diagram:



User → Salesforce Interface → Player Object → Match Performance Object → Reports → Dashboard

3.4 Technology Stack

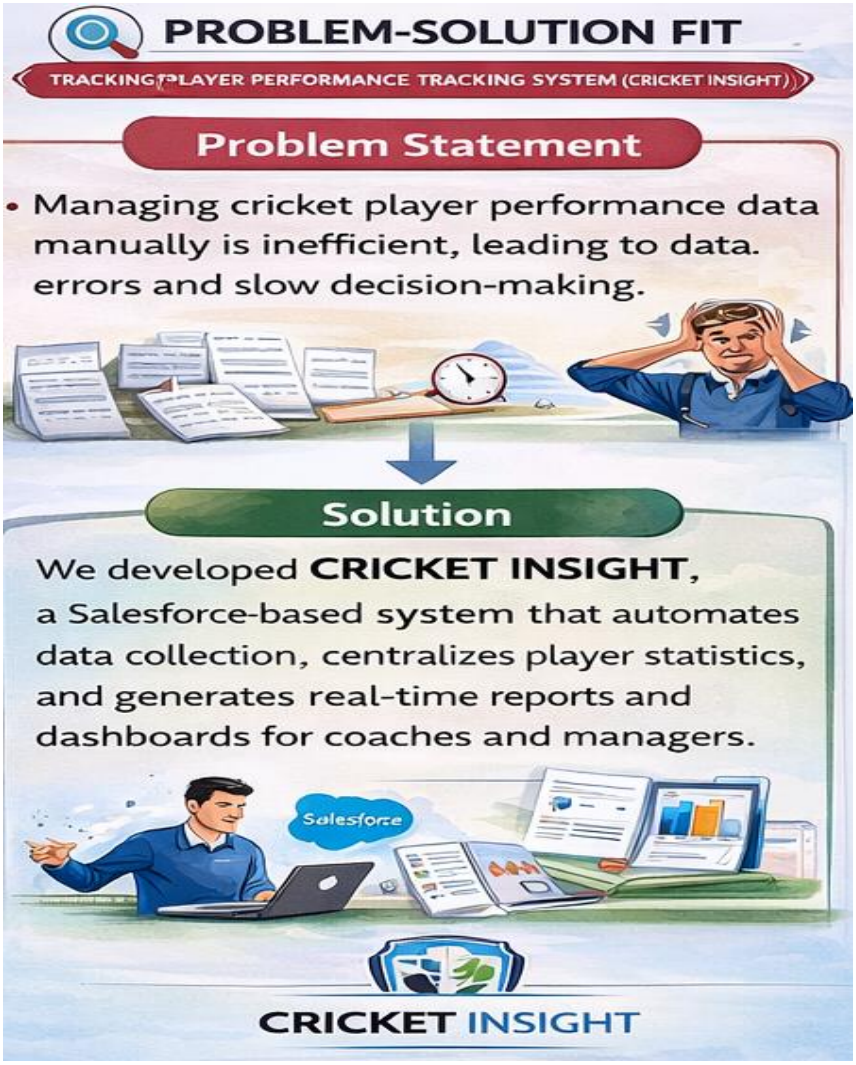
Layer	Technology
Frontend	Salesforce Lightning
Automation	Salesforce Flows
Backend	Salesforce Objects
Database	Salesforce Cloud
Analytics	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem Solution Fit

Traditional cricket performance tracking relies heavily on manual data entry using spreadsheets and physical records. This approach often results in errors, data duplication, and inefficient analysis.

The CRICKET INSIGHT system solves these issues by introducing a centralized cloud-based system using Salesforce. The application allows users to store match data securely, generate reports instantly, and analyze player performance using dashboards.



4.2 Proposed Solution

The CRICKET INSIGHT system includes:

• Custom Objects (Player, Match Performance)

• Master-Detail Relationships

• Roll-Up Summary Fields

• Lightning Application

• Automated Flows

• Interactive Reports and Dashboards

Key Features

• Centralized player database

• Real-time statistics

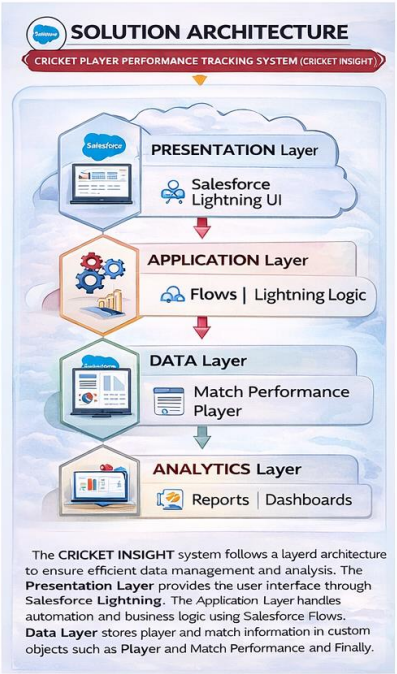
• Secure user access

• Easy report generation

• Scalable architecture

4.3 Solution Architecture

- Architecture Layers
- Presentation Layer (Lightning UI)
- Application Layer (Flows, Logic)
- Data Layer (Objects)
- Analytics Layer (Reports)



5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Project will follow an **Agile development approach**.

Development stages:

• Object creation

• Field configuration

• Reporting and dashboard creation

It works based on

- Agile-based execution
- Object creation → automation → reporting
- Sprint-wise development

Product Backlog & Sprint Schedule (CRICKSTATS)

Product Backlog, Sprint Schedule, and Estimation (4 Marks) Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As an admin, I want to create a Salesforce developer account so that I can configure and deploy the CRICKSTATS system.	1	High	Member1
Sprint-1	Data Modelling	USN-2	As an admin, I want to create Player and Match Performance objects so that player and match data can be stored systematically.	3	High	Member2
Sprint-2	Navigation	USN-3	As a user, I want separate tabs for each object so that I can easily navigate and manage records within the application.	3	High	Member3
Sprint-2	UI Design	USN-4	As a coach, I want a dedicated Lightning App so that all performance tracking features are accessible from one dashboard.	3	High	Member4
Sprint-2	Data Structure	USN-5	As an admin, I want to create player and match fields so that complete performance details can be captured accurately.	5	Medium	Member1
Sprint-2	Data Structure	USN-6	As a user, I want customized page layouts so that only relevant fields are displayed during data entry.	5	High	Member2
Sprint-2	Automation	USN-7	As a system, I want to validate player and match inputs so that incorrect data entries are prevented.	3	High	Member4
Sprint-3	Automation	USN-8	As a system, I want automated flows to update player statistics so that performance data remains accurate.	5	High	Member1

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	1 Days	02-03-2026	02-03-2026	20	02-03-2026
Sprint-2	20	3 Days	03-03-2026	05-03-2026	20	05-03-2026
Sprint-3	20	2 Days	06-03-2026	07-03-2026	20	07-03-2026
Sprint-4	20	1 Days	08-03-2026	08-03-2026	20	08-03-2026

Burndown Chart Explanation (CRICKSTATS Project)

The Burndown Chart represents the progress of the sprint by showing the remaining story points over the sprint duration. In the CRICKSTATS project, each sprint was planned for **6 days with 20 story points**.

At the start of the sprint, the remaining work was **20 story points**. As the development progressed each day, the team completed tasks such as **object creation, field configuration, data entry, and report generation**, which gradually reduced the remaining story points.

By the end of the sixth day, all **20 story points were completed**, indicating that the sprint goals were successfully achieved. The burndown chart clearly shows the steady progress of the development team and helps in monitoring the project status.

6. PROJECT DEVELOPMENT PHASE

Milestones

1. Salesforce Developer Account Creation

2. Custom Object Creation
3. Tab Creation
4. Lightning App Creation
5. Fields & Relationships
6. Roll-Up Summary Fields
7. Flow Automation

Project Flow – CRICKSTATS

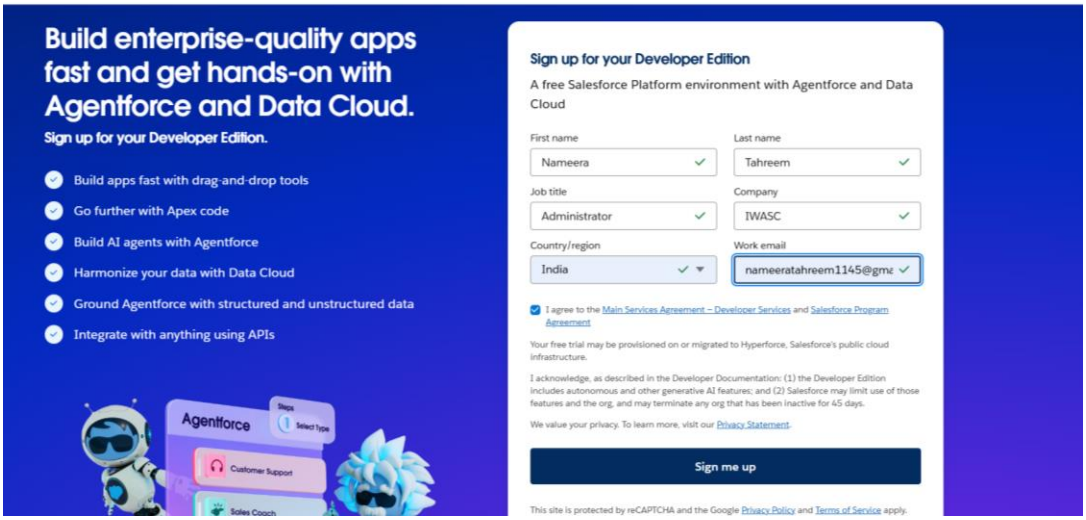
Milestone 1 : Creation of developer account
Milestone 2 : Object Creation
Milestone 3 : Tabs
Milestone 4 : The Lightning App
Milestone 5 : Fields & Relationships
Milestone 6 : Roll-up Summary
Milestone 7 : Flows

Implementation

Milestone 1 - Salesforce developer account creation :

Activity 1: Creating Developer Account:
Creating a developer org in salesforce.

1. Go to https://developer.salesforce.com/signup
2. On the sign up form, enter the following details



1. First name & Last name
2. Email
3. Role : Developer
4. Company: College or Company Name
5. Country: India
6. Postal Code : pin code
7. Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in that format : username@organization.com

Click on sign me up after filling these.

Activity 2: Account Activation :

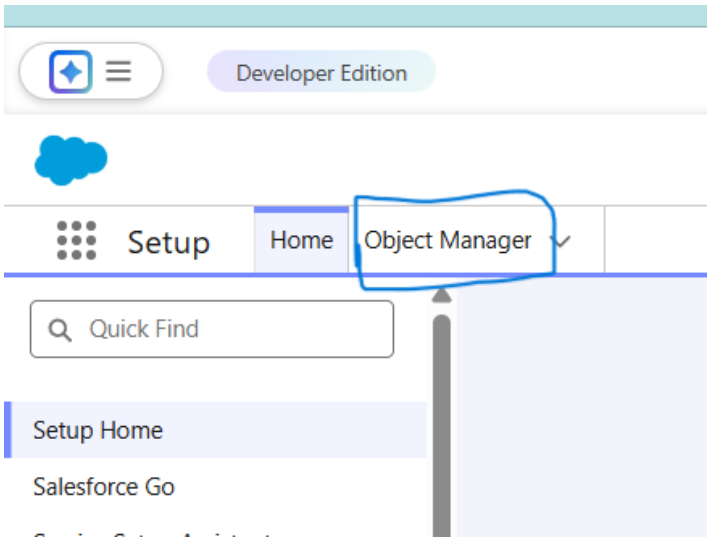
1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.
2. Click on Verify Account.
3. Give a password and answer a security question and click on change password.
4. Then you will redirect to your salesforce setup page.

Milestone 2 - Object Creation

Activity 1 : Player Object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.



3. On the Object Manager page, click Create | Custom Object.
4. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- Label : Player
- Plural Label : Players
- Enter Record Name Label and Format
- Record Name : Player Name
- Data Type : Text
- In Optional features : check the boxes for Allow Reports | Allow Activities | Track Field History.
- Search Status : check the box for Allow Search.
- Save

Activity 2 : Match Performance Object

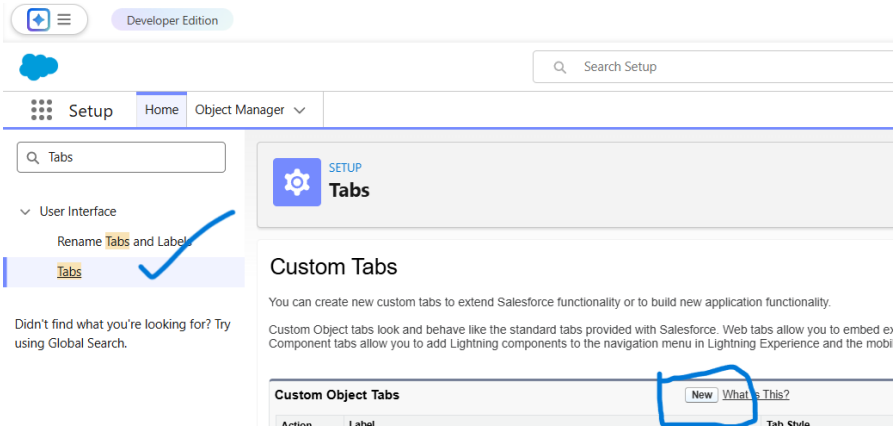
1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- Label : Match Performance
- Plural Label : Match Performances
- Enter Record Name Label and Format
- Record Name : Customer Account Name
- Data Type : Text
- In Optional features : check the boxes for Allow Reports | Allow Activities | Track Field History.
- Search Status : check the box for Allow Search.
- Save.

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

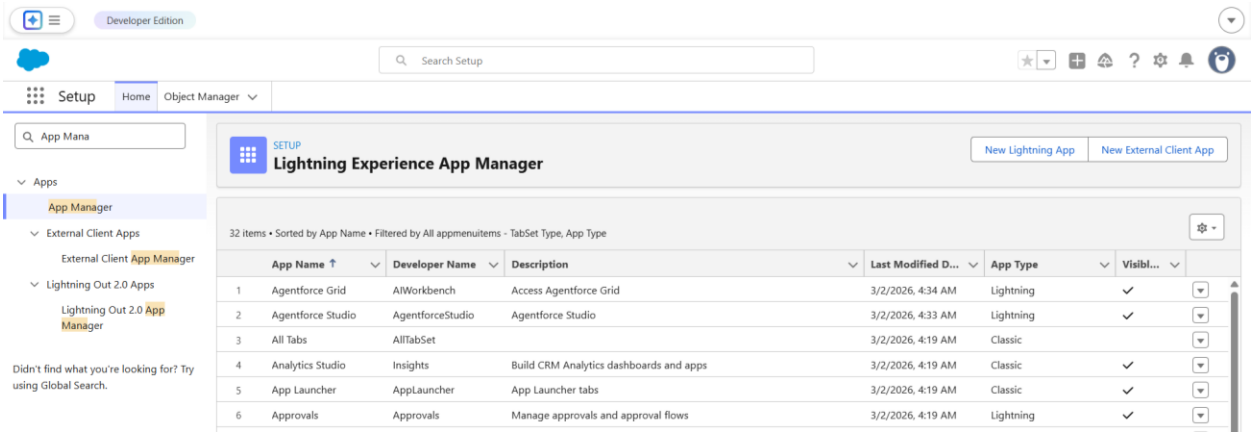
1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab



2. Select Object(Player) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.
5. Repeat the same steps for Match Performances.

Milestone 4 - The Lightning App

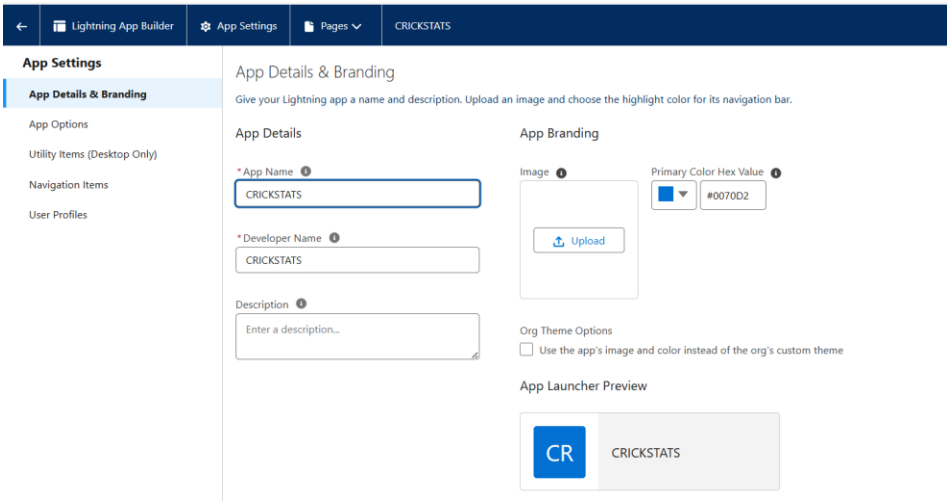
Activity 1 : Create a lightning app



1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.
2. Fill the app name in app details and branding as follow

App Name : CRICKSTATS

Developer Name : Auto Populates



Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.

Then click Next.

3. In App options

Navigation style : Standard navigation

Setup experience : setup

Supporters form factors : Desktop and phone

Then click Next

4. In Utility items

Utility Bar alignment : Default

Then click Next.

5. Navigation items

Select the created Custom Objects and required standard objects

- Players
- Match Performances

- Reports
- Dashboards

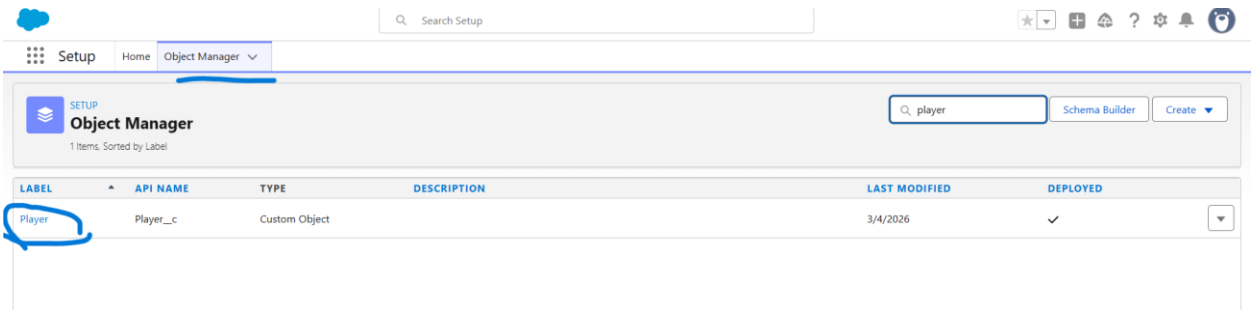
6. To Add User Profiles : System Administrator
7. Click Save & Finish.

Milestone 5 : Fields & Relationships

Activity 1 : Create Custom fields for Player object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : Player
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.
6. Next, choose a data type as Text. Choosing a data type helps you format the field input.
7. Click on next.
8. Data Type : Text
   Field Label: Player Name
   Field Name : Auto Populates
   Length : 50

Click on Next → Next → Save and new.



9. Repeat the Same steps for remaining fields

● Data Type : Text
Field Label: Player Number

Field Name : Auto Populates
Length : 3

Click on Next → Next → Save and new.

● Data Type : Rich Text Area
Field Label : Profile Picture
Field Name : Auto Populates

Click on Next → Next → Save and new.

● Data Type : Date
Field Label : Date of Birth
Field Name : Auto Populates

Click on Next → Next → Save and new.

● Data Type : Picklist
Field Label : Role
Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

Batsman
Bowler
Batsman & Wicket Keeper
All Rounder

● Data Type : Picklist
Field Label : Batting Style
Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

Right- Handed
Left - Handed

Click on Next → Next → Save and new.

● Data Type : Picklist
Field Label : Bowling Style
Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

Right-Arm Fast
Left-Arm Fast
Right-Arm Medium
Left-Arm Medium
Right-Arm Spin
Left-Arm Spin

Click on Next → Next → Save and new.

● Data Type : Picklist
Field Label : Nationality
Field Name : Auto Populates

Value : Enter value, with each value separated by a new line.

Australia
Bangladesh
England
India
New Zealand
Pakistan
South Africa
Sri Lanka

United States of America

Click on Next → Next → Save and new.

● Data Type : Picklist
Field Label : Team
Field Name : Auto Populates

Value : Enter value, with each value separated by a new line

Chennai Super Kings (CSK)
Delhi Capitals (DC)
Kolkata Knight Riders (KKR)
Mumbai Indians (MI)
Punjab Kings (PBKS)
Rajasthan Royals (RR)
Royal Challengers Bangalore (RCB)
Sunrisers Hyderabad (SRH)
Gujarat Titans (GT)
Lucknow SuperGiants (LSG)

● Data Type : Formula
Field Label : AVG Score
Field Name : Auto Populates

Formula Return : Number

Formula :

```
IF(
 Matches_Played__c > 0,
 Total_Runs__c / Matches_Played__c ,
 0
 )
```

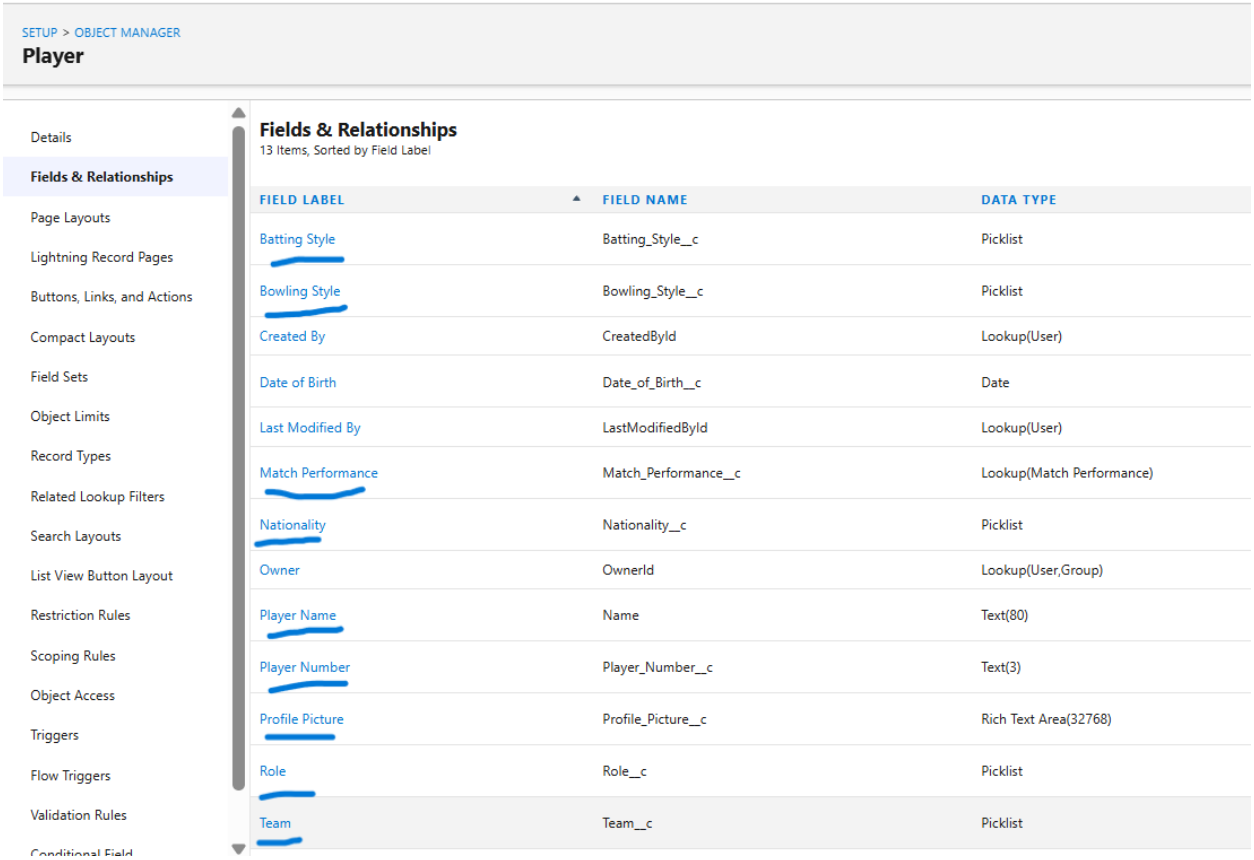
Click on Next → Next → Save & New.

● Data Type : Lookup Relationship
Related To : Match Performance

Field Label : Match Performance

Field Name : Auto Populates

Click on Next → Next → Save.



Milestone 6 : Roll-up Summary

Milestone 6 : Roll-up Summary
Activity 1 : Create Roll-up Summary for Player object.
Note :- Roll-up Summary can only be created on parent object in Master- Detail Relationship.
1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : Player
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.
Click Next.
6. Choose a data type as Roll-up Summary.
Click Next.
Field Label: Matches Played
Field Name : Auto Populates

Summarized Object : Match Performances
Select Roll-up Type : COUNT
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

● Data Type : Roll-up Summary Field
Label: Number of 50's
Field Name : Auto Populates
Summarized Object : Match Performances Select Roll-up
Type : COUNT
Filter Criteria : Only records meeting certain criteria should be included in the calculation.
Click on Next → Next → Save and new.

● Data Type : Roll-up Summary
Field Label: Number of 100's
Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : COUNT
Filter Criteria : Only records meeting certain criteria should be included in the calculation.
Click on Next → Next → Save and new.

● Data Type : Roll-up Summary
Field Label: Total 4's
Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Fours
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

● Data Type : Roll-up Summary
Field Label: Total 6's
Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Sixes
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.
● Data Type : Roll-up Summary
Field Label: Total Runs

Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Runs Scored
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

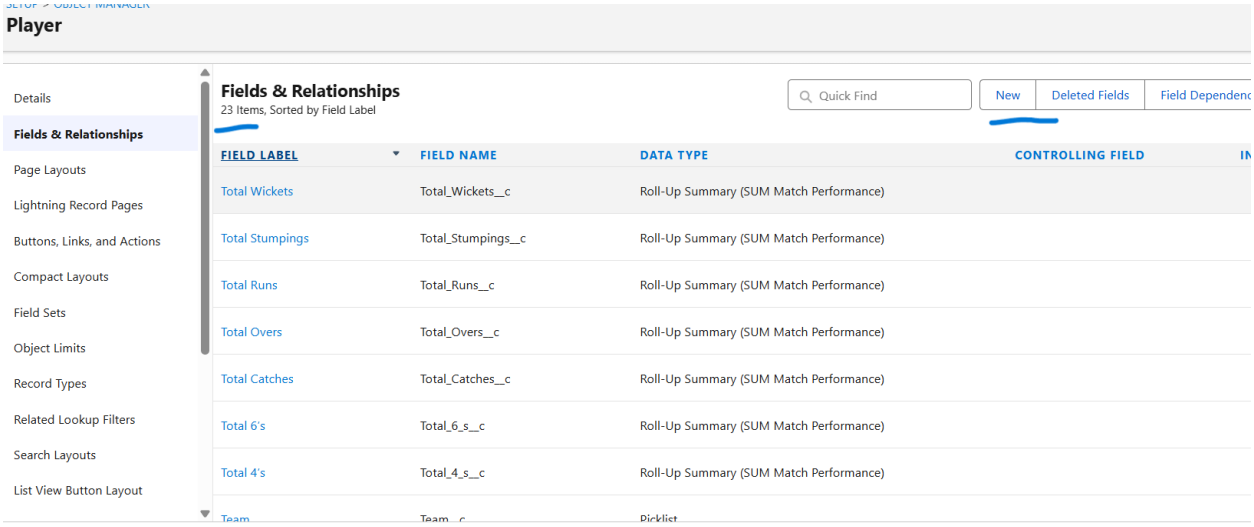
● Data Type : Roll-up Summary
Field Label: Total Overs
Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Overs Bowled
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

● Data Type : Roll-up Summary
Field Label: Total Wickets
Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Wickets Taken
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

● Data Type : Roll-up Summary
Field Label: Total Stumpings
Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Stumpings
Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.

● Data Type : Roll-up Summary
Field Label: Total Catches
Field Name : Auto Populates
Summarized Object : Match Performances
Select Roll-up Type : SUM
Field To Aggregate : Catches

Filter Criteria : All records should be included in the calculation.
Click on Next → Next → Save and new.



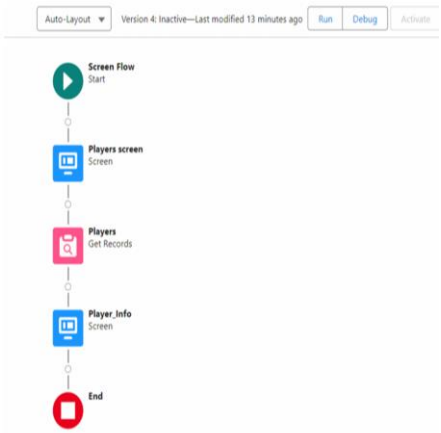
Milestone 7 : Flows

Activity 1 : Screen Flow

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

2. Select Screen Flow and click Create.

3. Click (+) Icon on the flow builder and Select Screen Component.



Label : Players screen

API : Players_screen

Select the Picklist component and place it on the screen.

Label : Team

API : Team

From Component Pane on the left side

select Component

Type : Picklist

Data Type : Text

Choice : Click New Choice Resources

Resource Type : Picklist

Choice Set API Name : Team

Object : Player

Data Type : Picklist

Field : Team

Click Done.

4. Click (+) Icon on the flow builder and Select Get Records Component.

Label : Players

API Name : Players

Object : Player

Filter player records :

Field : Team

Operator : Equals

Value : Click New Resource

Resource Type : Variable

API Name : Dynamic

Data Type : Text

Default Value : Screen

component : Team (Picklist)

5. Click (+) Icon on the flow builder and Select Screen Component.

Label : Player_info

API Name : Player_info

From Component Pane on the left side select Component

Type : Data table

API Name : Player_info_table

Label : Data Table Configure

Data Source : Source

Collection : Players from players (Player__c) In Configure

Columns : Add all the required Columns Profile Picture | Player Name | Total Runs | AVG Score | Batting Style | Bowling Style | Matches Played | Number of 50's | Number of 100's Click Done.Click Save.

Flow Label : Player Flow Flow

API Name : Player_

Activity 2 : Flow on Home Page

1. On your CRICKSTATS Application on the top right of the Navigation Bar click on Personalize your nav bar icon (Pencil Icon) and Add Home Page and click Save.

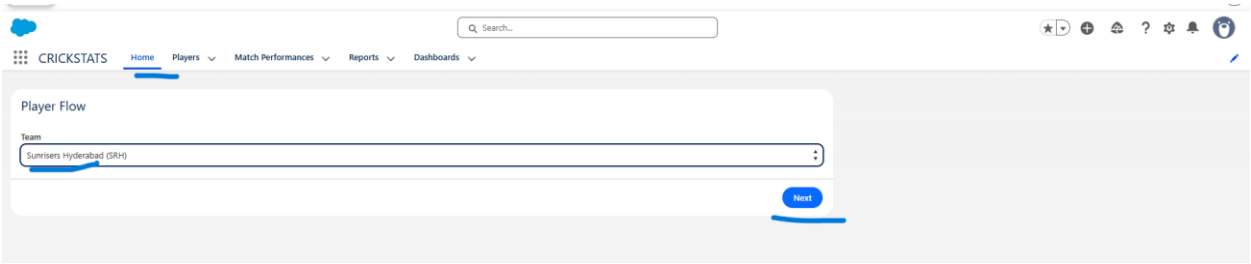
3. Flow : Players Flow

4. Click Save and Activation.

5. Click on App Default and select Assign to Apps.

6. Select CRICKSTAS App and Click Next and then click Save.



7. FUNCTIONAL & PERFORMANCE TESTING

Testing was performed using the Salesforce Lightning interface.

The following were verified:

• Player and Match Performance record creation

• Validation rules

• Automation flows

• Roll-up summary calculations

• Report generation

• Dashboard visualization

The application was tested with multiple records to ensure system accuracy and performance.

During the testing phase, screenshots were captured from the Salesforce Lightning user interface to verify the correct functioning of all implemented features in the CRICKSTATS system. These include record creation for Player and Match Performance objects; validation rule checks for mandatory fields, score limits, and input constraints; verification of record type behavior for Domestic and International match categories; and flow execution for automatic updating of

player statistics and data consistency.]

The functionality of roll-up summary fields was also tested to ensure accurate calculation of total runs, wickets, averages, and performance metrics. In addition, system performance was evaluated by monitoring response time during data entry, report generation, and dashboard loading. The application was tested under multiple user interactions to ensure stable performance without delays.

Screenshots of generated reports and interactive dashboards were documented to confirm accurate data visualization, real-time updates, and reliable performance tracking. These testing activities ensured that the CRICKSTATS platform met both functional and performance requirements and was ready for deployment.

NOTE : Enter some records in the Player Object and Match Performance Object to get the results.

1. Select one Team from the Picklist and Click Next.

8. ADVANTAGES & DISADVANTAGES

Advantages

• Centralized data system

• Real-time performance analysis

• Secure cloud platform

• Reduced manual effort

• Easy report generation

Disadvantages

• Requires Salesforce platform access

• Internet connectivity required

• Limited offline functionality

9. CONCLUSION

The **CRICKET INSIGHT** system successfully demonstrates how Salesforce can be used to build a cloud-based sports performance tracking system.

The project automates player statistics management, improves data accuracy, and provides powerful analytics for better decision-making.

This project also demonstrates practical implementation of **Salesforce CRM development, Agile methodology, and SDLC concepts.**

10. FUTURE SCOPE

Future improvements may include:

• Mobile application integration

• AI-based performance prediction

• Player ranking system

• Integration with match video analysis

• Public cricket statistics portal

11. APPENDIX

- Salesforce Objects and Fields
- Match Data Records
- Flow Configurations

Thank You
